REVA University

Major Project Report-Phase-1 Review

Student and Project Details

Field	Details
Student name	
SRN / Roll number	
Program and Section	
Project title	
Faculty guide	

1. Literature Survey and Requirement Analysis

1.1 Problem statement — *The problem your module solves, who it is for, and why it matters (4–5 lines).*

1.2 Literature survey

Paper (author, year, venue)	Approach / technique	Strength	Limitation

1.3 Literature gaps — *2–3 gaps the surveyed work leaves open, and which one your module addresses.*

1.4 Requirements

ID	Requirement	Type (functional / non-functional)	Priority
R1			
R2			
R3			

Evidence: quiz result and survey papers with gaps identified (Week 2).

2. System and Detailed Design

2.1 System design — *Architecture of the module: components, data stores, interfaces and why you chose them (5–6 lines, diagram in Appendix A).*

2.2 Detailed design: diagrams included

Diagram	Shows
Flowchart	Main logic and decision flow
UML (class / sequence / use case)	Structure and interactions
DFD (level 0 and 1)	Data flows between processes and stores

2.3 Design decisions — *2–3 choices you made (technology, data model, algorithm) and the alternatives you rejected.*

2.4 Traceability

Requirement ID	Design element that satisfies it
R1	
R2	
R3	

Evidence: system design document (Week 4), detailed design document with all three diagram types (Week 6).

3. Implementation and Functionality

3.1 Progress against checkpoints

Checkpoint	Target	What is working (features)	Honest completion (%)
Core implementation (Week 8)	about 30%		
Complete, refine and debug (Week 10)	about 55%		
Consolidation, Phase-1 (Week 14)	about 70%		

3.2 Key features implemented — *For each major feature: what it does, how you built it, and the main code file or function (a short list).*

3.3 Code quality and optimization — *Structure, naming, error handling, and one improvement you made for performance or readability, with a before/after note.*

3.4 Deviations from the design — *What changed from the Section 2 design and why, with a one-line justification each.*

Evidence: screenshots of core output (Week 8), completed and refined output (Week 10), integrated modules and change screenshots (Week 14).

4. Testing, Debugging and Integration

4.1 Testcase design

Test ID	Feature / requirement	Input	Expected output	Actual output	Pass / fail
T1					
T2 (boundary)					
T3 (negative)					

4.2 Test summary — *Total tests, passed, failed, and the coverage you aimed for (2–3 lines).*

4.3 Bugs found and fixed

Bug	Root cause (one line)	Fix	Evidence
			before/after screenshot

4.4 Integration of Module-1 and Module-2 — *How the modules connect, the integration bugs you met, and how you resolved them (4–5 lines).*

Evidence: testcase documents and testing output (Week 12), bug-fix screenshots with root-cause notes (Weeks 10 and 14).

5. Documentation, Phase-2 Plan and Viva Readiness

5.1 My individual contribution — *What you personally designed, coded and tested, with the weeks they fall in. Team members and what they did (3–5 lines).*

5.2 Phase-2 pending-work plan

Pending work (about 30%)	Priority	Planned approach	Target week

5.3 Challenges and learnings — *The hardest technical problem, what you tried, what worked, and what you would do differently (4–5 lines).*

5.4 Viva preparation — *Be ready to explain without notes:*

- Why this design and these technologies, and what the alternatives were
- How each diagram maps to your code
- Your key algorithm or logic, with complexity
- A bug you found and how you found its root cause
- What is left to build in Phase-2 and why

Evidence: Phase-2 pending-work plan document (Week 14); structured viva (Week 16).

Declaration

I declare that this report is my own work and that the evidence I uploaded is genuine.
